RE: McFarland and Hullinger Crystal Mine, ACT/045/010,
Tooele County, Utah

On October 1, 1985, I spoke on the phone to Mr. Sid Hullinger of McFarland and Hullinger about the reclamation of the Crystal Mine. I told him that in our site visit of September 17 we had noted good success with revegetation in the lower reclaimed area, but that the upper area was a concern, and would probably not be eligible for bond release next year.

He indicated that he felt that the upper area was solid rock and that going back in to rework that area would probably disturb the lower area. He indicated that they would do no additional work this year on the upper area. I told him that the Division would evaluate whether or not the bond could be released for that area next year, when an evaluation of the rest of the site is done.
